Madhu Mithra

Data and analytics portfolio project focused on digital shelf performance, campaign optimization, product detail page quality, and stakeholder reporting. This live app combines a polished case-study presentation with an interactive analytics dashboard you can share directly in applications.

Python | Pandas | NumPy | Streamlit | Plotly | OpenPyXL | Analytics Storytelling

Project Snapshot

This project simulates how a beauty brand could monitor campaign efficiency, conversion trends, and PDP content quality in one place. It was designed to show practical analytics skills: data generation, KPI design, dashboard building, and business-friendly Excel export.

The portfolio angle is intentional: recruiters and hiring teams can quickly see both the technical stack and the business thinking behind the work.

Skills Demonstrated

- Built a live analytics dashboard in Streamlit
- Modeled campaign and PDP data with Python
- Calculated KPI deltas, funnel metrics, and spend mix
- Exported structured reports for stakeholder sharing
- Presented technical work in a portfolio-friendly format

CAMPAIGNS TRACKED	WEEKS MODELED	SKUS AUDITED

Portfolio Walkthrough

Business Problem

Brand and ecommerce teams need a simple way to connect ad efficiency with digital shelf readiness. A strong campaign can still underperform if PDP content is weak, incomplete, or poorly rated.

Solution Built

I created a lightweight analytics product that combines campaign trend analysis, channel mix, funnel visibility, and SKU-level content scoring in one shareable app.

Why This Works As A Portfolio

It shows technical implementation, visual communication, and business interpretation together. Instead of only linking raw code, this page lets hiring teams understand the project quickly and then explore the live dashboard below.

Live Dashboard

Impressions	CTR	Conv. Rate	Cost Per Conv.	ROAS
1.1M	6.2%	3.7%	EUR 11.32	3.6x
↑ +7.6%	↑ +8.8%	↑ +9.2%	↓ -20.4%	↑ +30.3%
